***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-18, 21-29, and 31-39, drawn to *a method for predicting intake manifold pressure*, classified in class 701, subclass 106.
  - II. Claims 19, 20, and 30, drawn to, *a method for obtaining a predicted value of a variable, and a predicting apparatus*, classified in class 706, subclass 4.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of group (I) and group (II) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 18, 29, and 39 give evidence that this is the case. The subcombination has separate utility such as in an apparatus for controlling vehicle performance.

Because these inventions are distinct for the reasons given above and the search required for group (I) is not required for group (II), restriction for examination purposes as indicated is proper.
3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
